3. Analyst-Assist Summary

AI-assisted analysis (evidence-bound) · provider:
deterministic

This report covers 350 Wazuh alerts. Of these, 97 are High or Critical severity (31 Critical, 66 High) and warrant analyst attention. The dominant recurring pattern is "Recurring rule "sshd: Attempt to login using a non-existent user" (rule 5710)" (109 alerts; evidence 1691000002.961578, 1691000003.638747, 1691000004.679904, 1691000012.789275). 6 high-volume low/medium-severity rule(s) are flagged as false-positive / tuning candidates for analyst review. All statements above are derived solely from the uploaded evidence; no external threat intelligence, IOCs, or incident conclusions have been added.

This analysis is generated automatically from the uploaded alerts only. It assists — but does not replace — a human analyst. Every finding cites the underlying event IDs. It contains no fabricated incidents, IOCs, or techniques.

Key observations:

- 350 total alerts were normalized from the upload spanning 2026-09-20 to 2026-09-27.
- Severity breakdown — Critical: 31, High: 66, Medium: 61, Low: 192.
- The most active source/rule cluster is 50.48.207.164 ! "sshd: Attempt to login using a non-existent user" with 29 alerts (evidence: 1691000013.989255, 1691000018.645314, 1691000023.307192, 1691000029.659228, 1691000034.230081).
